

RUBIS Seamlessly Manages Its Daily Operations Through A Centralized Platform

Need

- A Centralized Safety Digital System
- Riddance of Manual Handling for Safety Processes
- Error-Free & Seamless Quality Checks.
- Standardized Processes for Contractor Management

The Challenges

- Lack of Centralized Platforms
- Cumbersome, expensive, and time-consuming documentation processes.
- Increasing errors due to manual processes.
- Security and Confidentiality Issues
- Compliance Risks
- Vehicle, delivery, and standard quality checks

Our Client

Rubis

Distributing Energy for Everyday Life.

Rubis is a significant player in the fuel distribution business in Kenya. Their state-of-art infrastructure is the terminal benchmark of their business. Their commitment to EHS regarding safety, equality, and ethics fully integrates into their operational activities while supporting value creation.

ASK-EHS and RUBIS

The need for a centralized platform to manage their operations and quality checks led RUBIS to ASK-EHS.

Rubis is geographically widespread in the African continent. And as history says, even they managed data manually, that is, through excel sheets or physical papers. Therefore the need for digitalization weighed with urgency for seamless operations (regarding EHS and quality-checks operations).

Rubis connected with the ASK-EHS team to get a centralized destination for all their data to save time, reduce costs, and have error-free processes for efficient quality checks.

The Challenges

Due to its widespread geographical locations in Africa, it was getting tedious for Rubis to manage its everyday operations. They required a centralized platform to manage all the tasks and processes. And considering that it is serving in the energy sector, EHS compliance and quality checks were top-priority.

- Lack of Centralized Platforms
- Cumbersome, expensive, and time-consuming documentation processes.
- Increasing errors due to manual processes.
- Security and Confidentiality Issues
- Compliance Risks
- Vehicle, delivery, and standard quality checks

Also, Rubis has a different process for their training and onboarding processes. The company required the employees to complete the essential training before starting their journey.

The Solution

ASK-EHS helped RUBIS set up a powerful and critical decision-making centralized platform for its EHS and non-EHS processes.

- Centralized Database
- Detailed and Quick Onboarding Process
- Global Access Control System
- Error-free Quality Checks
- Centralized Compliance Library
- Seamless PTW System

Therefore this had to be incorporated exceptionally well in the records for the employees to have a hassle-free first day.

They also initiated a request to the ASK-EHS team if they could have a globally centralized access control platform.

The Solution

ASK-EHS helped RUBIS set up a powerful and critical decision-making centralized platform for its EHS and non-EHS processes.

- Centralized Database
- Detailed and Quick Onboarding Process
- Global Access Control System
- Error-free Quality Checks
- Centralized Compliance Library
- Seamless PTW System

ASK-EHS set up a centralized platform for everyday processes. It seemingly saved RUBIS lots of time and resources.

The digitalized training process ensured that the employees' required training was completed before the onboarding process. This training could be internal or external but was updated by the system as required by the selection processes.

The global access control reduced the time-consuming process of delivering gate passes significantly. Any employee/visitor related to Rubis could enter any other premises with the initially issued gate pass.

Additionally, the EHS digital system seamlessly manages the :-

- PTW system
- Document Management
- Central Action Plan
- Truck Inspection
- Incident Management
- Site Inspection
- Quality NC
- Risks & Opportunities Assessments,
- Retail Station Compliance

The truck inspection module enables the safety team to perform proper vehicle and delivery quality checks. The digital system required a valid driving license, pre-shift inspection report, updated O&M records, etc., to give a green signal for positive vehicle and equipment operations.

Retail Station Compliance helps RUBIS to maintain a compliance library with incredible security features. As contractors managed the retail stations, ASK EHS incorporated a system so that all the statutory and safety compliances are measured and worked according to Rubis defined standards. The automated system quickly sent alerts to the concerned people and escalated the issues to headquarters whenever necessary.

Therefore, the ASK-EHS team delivered solutions for quick decision-making, smoother processes, better quality checks, enhanced safety, and a unified vision.

Conclusion

ASK-EHS developed a digitalized and centralized platform for standardized procedures and better quality checks for RUBIS, resulting in improved work quality.

Using digital solutions for EHS and quality checks, the processes reduced potential wastage from manual work and helped guarantee high-quality work with augmented security.
